Art Unit: 1646

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-20, 24-28 drawn to a product of an isolated nucleic acid encoding a  $\beta$ 3 sub-unit from a voltage gated sodium channel and a first method of use to amplify  $\beta$ 3 subunit nucleic acids. Group I also contains the encoded polypeptide.

Group II, claim(s) 21, drawn to a second method of use of a nucleic in a method of detection.

Group III, claim(s) 29-36 and 38, drawn to a third method of use to produce a polypeptide, the polypeptide produced and a first method of use to screen for ligands.

Group IV, claim(s) 37, drawn to a forth method of use utilizing a host cell comprising a polynucleotide to screen for ligands.

Under 37 CFR 1.475, (d) If multiple products, processes of manufacture or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto will be considered as the main invention in the claims, see PCT Article 17(3)(a) and § 1.476(c).

Therefore, Group I comprises the first recited product and first associated method of use drawn to a DNA encoding a  $\beta$ 3 subunit and it's use to amplify other nucleic acids. This first use differs from and does not share a special technical feature with the methods of Groups II, III, and IV because each of these additional methods, while utilizing the same product nucleic acid as the first listed method, have different and unrelated outcomes which require different and unrelated steps to be practiced.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

---

Art Unit: 1646

β3 subunits from rats, SEQ ID NO: 1 and 3

β3 subunits from humans, SEQ ID NO: 2 and 4

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the two different species of invention are drawn to entirely different products with different structural features.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
